TYPICAL MECHANICAL PROPERTIES AS WELDED:

- Yield Strength (psi) 64,000
- Tensile Strength (psi) 96,000
- Elongation 36%

WELDING PROPERTIES:
The nominal composition of this weld metals is 19% Chromium and 10% Nickel with columbium preventing carbide precipitation making it more corrosion resistance than 308. Used on base metals such as 347 and 321 also used weld metal subjected to temperatures above 700 f.

347-16 is a titania type coating for either alternating current (AC) or direct current (DC) reverse polarity.
347-15 is a lime type coating for use with direct current (DC) reverse polarity.

RECOMMENDED WELDING PARAMETERS:

- 3/32 X 12 AMPS 50-80
- 1/8 X 14 AMPS 70-110
- 5/32 X 14 AMPS 100-140

All parameters are suggested as basic guidelines and will vary depending on joint design, number of passes and other factors.

SPECIFICATION COMPLIANCE: ANSI/AWS A5.4 & ASME SFA 5.4 E 347-16
WARNING: PROTECT yourself and others. Read and understand this information.
FUMES AND GASES can be hazardous to your health.
ARC RAYS can injure eyes and burn skin.
ELECTRIC SHOCK can KILL.
- Before use, read and understand the manufacturer's instructions, Material Safety Data Sheets (MSDSs), and your employer's safety practices.
- Keep your head out of fumes.
- Use enough ventilation, exhaust at the arc, or both, to keep fumes and gases from your breathing zone and the general area.
- Wear correct eye, ear, and body protection.
- Do not touch live electrical parts.

All statements, information and data given are believed to be accurate and reliable but are presented without guarantee, warranty or responsibility of any kind, expressed or implied.
